Marine Genomics

Editor: F.O. Glöckner (Bremen, Germany)

Associate Editors: M.I. Arnone (Naples, Italy) and C. Bowler (Paris, France)

Managing Editor: C. Verde (Naples, Italy)

The journal publishes papers on all functional and evolutionary aspects of genes, chromatin, chromosomes and (meta)genomes of marine (and freshwater) organisms. It deals with new genome-enabled insights into the broader framework of environmental science. Topics within the scope of this journal include:

- * Population genomics and ecology
- * Evolutionary and developmental genomics
- * Comparative genomics
- * Metagenomics
- * Environmental genomics
- * Systems biology

More specific topics include: geographic and phylogenomic characterization of aquatic organisms, metabolic capacities and pathways of organisms and communities, biogeochemical cycles, genomics and integrative approaches applied to microbial ecology including (meta) transcriptomics and (meta)proteomics, tracking of infectious diseases, environmental stress, global climate change and ecosystem modelling.

Bibliographic & Ordering information

ISSN: 1874-7787
Imprint: ELSEVIER
2012, Volumes 5-8, 4 issues

Audience

Marine and freshwater biologists and ecologists, molecular biologists, geneticists, biotechnologists, oceanographers and modellers.

The ultimate scientific, technical & medical resource: www.sciencedirect.com

The largest abstract and citation database of peer-reviewed literature and quality web sources: www.scopus.com

Editor-in-Chief

Benefits of Publishing with Elsevier

- **Easy online submission**
Submit your paper online at:
www.elsevier.com/locate/margen

The editorial process is performed electronically, which shortens the refereeing time. Submissions are free of charge
- **Fast maximum online visibility, accessible to over 17 Million readers**
After acceptance your article reaches your peers through ScienceDirect (www.sciencedirect.com), the world's leading provider of electronic scientific information. Your article is immediately linkable and citable using the article's Digital Object Identifier.
- **Liberal copyright policy**
Elsevier's copyright statements allow for posting on pre- and post-print servers, as well as personal homepages and institutional repositories, provided a link to the official version on ScienceDirect is also indicated. Please visit <http://www.elsevier.com/authorsrights> for a full overview of Elsevier's copyright policy.
- **More services for authors, proofs, online tracking, free (e-)offprints**
It is easy to check the progress of your paper online (<http://ees.elsevier.com>)
When your article is published, you will no doubt want copies of it for your own use and distribution. In the case of most journals, Elsevier will offer you a free e-offprint; and paper offprints can also be ordered.
- **Research4Life - Access to research at free or little cost for developing countries**
Elsevier partners with organizations around the world to improve the exchange of information and transmission of knowledge. As a leading contributor to Research4Life (www.research4life.org), which includes the three programs HINARI, AGORA, and OARE, Elsevier partners with more than 150 publishers, WHO, FAO, UNEP, Yale, Cornell, and the International Association of STM Publishers. Research4Life currently provides more than 7500 journals, ensuring that scientists, policymakers, healthcare workers and librarians at thousands of institutions in the developing world have access to online peer-reviewed research at no or very low cost.
